WHITE BACKLIT

- * Can be used for both daytime and nighttime
- * Ultra fine printing quality with high density
- * Long outdoor durability (3 -5 years)
- * Easy application (pre-coated adhesive)

Like other kinds of HDTE printing media, the printing images can be digitally processed via computer, which makes designing and printing size easy and versatile.

When Balckli film is used for interior illuminated displays, the level of printing quality and density of the image is comparable to silver halide photographs.

This substrate is designed to be used around the clock and can also be used in sunlight. Furthermore, unlike silver halide photographs, the outdoor life expectancy of this substrate is between 3 and 5 years.

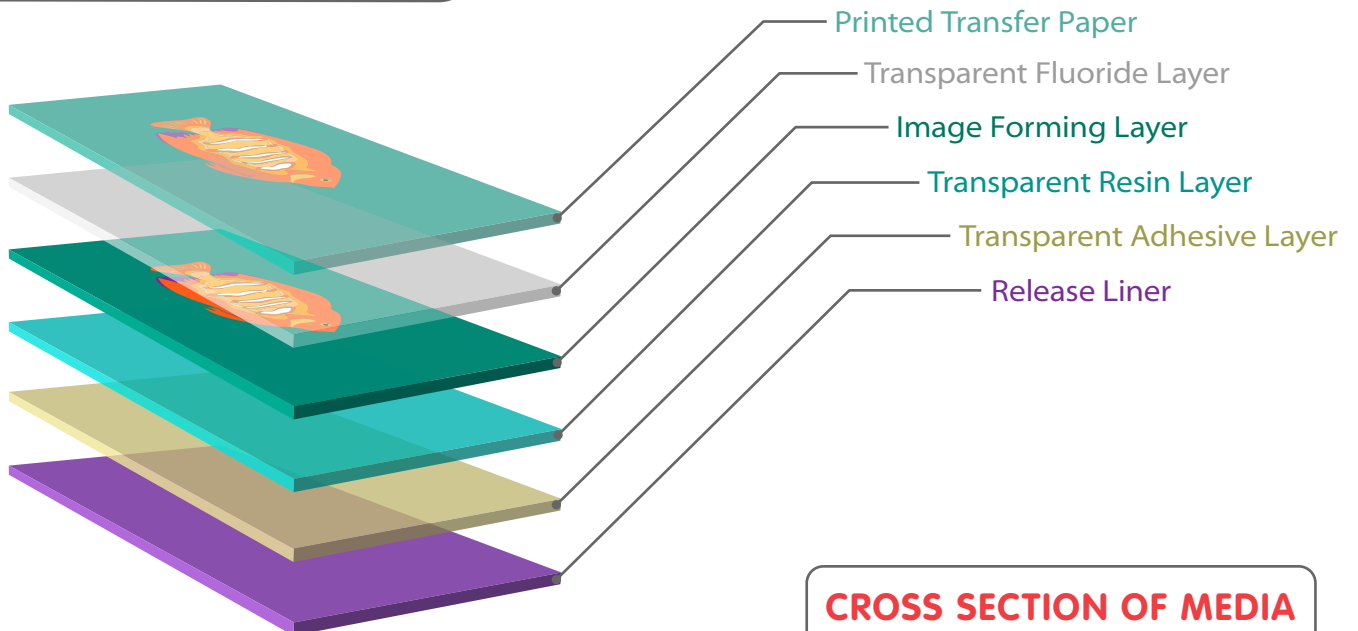

One of the unique properties of this substrate is that it can be printed on either side of the adhesive, which allows adhesion to the interior of a lightbox or a glass panel, which makes it great for shop window decals also.

EXAMPLE OF MEDIA

RECOMMENDED APPLICATIONS

Illuminated signboards for both Indoor and outdoor use, Interior decoration, Window display, Restaurant menu panels, Outdoor Billboards, Guide sign boards, Bulletin boards, etc.
